

Muscular Dystrophy

Specifically designed to give maximum support and comfort, using 6 straps to enable full adjustment. Specific tailoring to assist against hip rotation while providing full support to legs. The addition of straps to link leg supports close the loop underneath the legs making it difficult for legs to part. Stays are included within the back to give spinal support. The head support is fully adjustable to assist when lifting from a lying position. The external layer to the sling is made of ultra low friction material to facilitate easier fitment and is fully padded with foam. Additional handles are fitted to make positioning easier

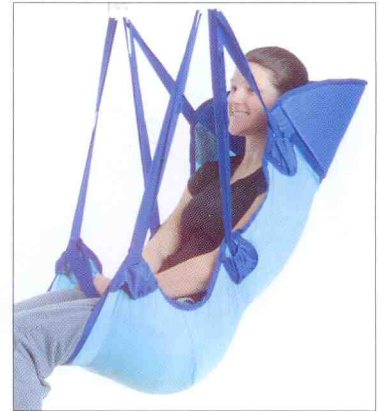

SAS Para The moulded chair solution!

The SAS Para is designed specifically for situations where the user has to sit on a sling in a moulded chair. The fabric is soft, gossamer thin and strong (as used by Special Forces where performance is everything!).

High air permeability helps to reduce sweating and associated risks plus the unique shape incorporating a “pommel” provides full support and security. Specially designed “Pocket Straps” enhance discretion and eliminates the risk of straps snagging in wheels.

Due to the lightweight fabric, the SAS Para has a maximum load of 65kg (10 stone). Larger users will find that the InChair Glove, below, is an ideal alternative.

Bath Glove

Based on the highly acclaimed SAS Para the Bath Glove offers an excellent solution for transferring into the bath or swimming pool. Full body support is provided and a useful “pommel” is incorporated to reduce the risk of the user sliding through when wet and slippery.

The special soft, strong fabric provides significant tissue viability benefits over traditional “mesh”. It also enables water to drain through more readily and easily. It even dries faster!

InChair - Spot the sling!

Titanium 'TiLite' chair courtesy of Gerald Simmonds Healthcare 01296 380200.

Similarly designed to the SAS Para but not limited to use with moulded chairs. The InChair Glove is suitable for general use where users remain seated on the sling for longer periods. Very soft and comfortable with excellent air permeability to help in reducing sweating. Pressure maps, resulting from independent testing, provide powerful evidence to illustrate the benefits of this revolutionary new sling. Also fitted with “Pocket Strap” system to keep sling more discreet and avoid straps tangling with wheels, brakes, etc. Suitable for wide range of sizes up to 350kg (55 stone).
