

Muscular Dystrophy

Specifically designed to give maximum support and comfort, using 6 straps to enable full adjustment. Specific tailoring to assist against hip rotation while providing full support to legs. The addition of straps to link leg supports close the loop underneath the legs making it difficult for legs to part. Stays are included within the back to give spinal support. The head support is fully adjustable to assist when lifting from a lying position. The external layer to the sling is made of ultra low friction material to facilitate easier fitment and is fully padded with foam. Additional handles are fitted to make positioning easier

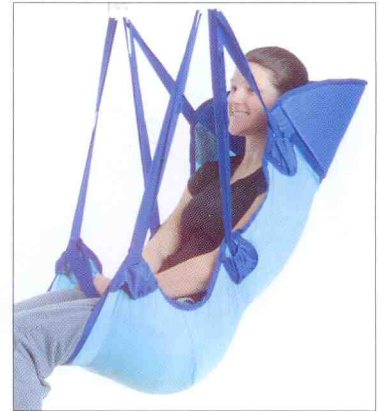

SAS Para The moulded chair solution!

The SAS Para is designed specifically for situations where the user has to sit on a sling in a moulded chair. The fabric is soft, gossamer thin and strong (as used by Special Forces where performance is everything!).

High air permeability helps to reduce sweating and associated risks plus the unique shape incorporating a “pommel” provides full support and security. Specially designed “Pocket Straps” enhance discretion and eliminates the risk of straps snagging in wheels.

Due to the lightweight fabric, the SAS Para has a maximum load of 65kg (10 stone). Larger users will find that the InChair Glove, below, is an ideal alternative.

Bath Glove

Based on the highly acclaimed SAS Para the Bath Glove offers an excellent solution for transferring into the bath or swimming pool. Full body support is provided and a useful “pommel” is incorporated to reduce the risk of the user sliding through when wet and slippery.

The special soft, strong fabric provides significant tissue viability benefits over traditional “mesh”. It also enables water to drain through more readily and easily. It even dries faster!

InChair - Spot the sling!

Titanium 'TiLite' chair courtesy of Gerald Simmonds Healthcare 01296 380200.

Similarly designed to the SAS Para but not limited to use with moulded chairs. The InChair Glove is suitable for general use where users remain seated on the sling for longer periods. Very soft and comfortable with excellent air permeability to help in reducing sweating. Pressure maps, resulting from independent testing, provide powerful evidence to illustrate the benefits of this revolutionary new sling. Also fitted with “Pocket Strap” system to keep sling more discreet and avoid straps tangling with wheels, brakes, etc. Suitable for wide range of sizes up to 350kg (55 stone).

Foxy Glove

How often do you find that the leg supports of a standard sling are too short to reach around the hips and under the thigh? The Foxy is possibly the first style of sling in the world to be specifically designed and cut for the feminine form. Ladies are a different shape from men so why should slings not be tailored to take account of the variations.

Not just pretty in colour, Foxy Glove slings are made from material that is ultra low friction in order to facilitate easier fitment around the hips and under the thighs.

The unique construction also contributes to prevention of pressure ulcers.

Women are shaped differently, why should they have to accept the discomfort of a sling designed for slim hips?

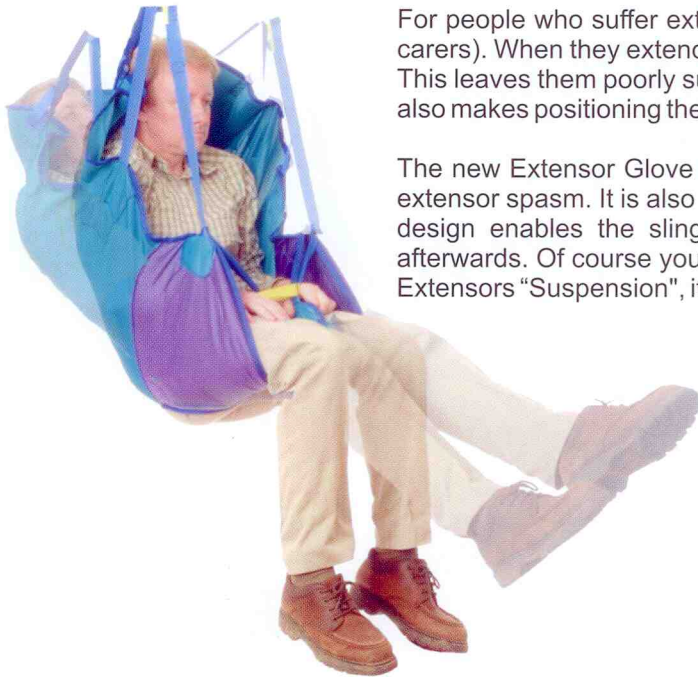

Extensor Glove

For people who suffer extensor spasm using a sling is usually a nightmare! (and for their carers). When they extend the leg supports of their sling usually ride up towards their groin. This leaves them poorly supported, badly postured, undignified and very uncomfortable. It also makes positioning them into a wheelchair more difficult than it needs to be.

The new Extensor Glove incorporates a unique "Suspension" facility that counterpoises extensor spasm. It is also one of the most supportive slings available anywhere. Its unique design enables the sling to move with the spasm and return to its original position afterwards. Of course you don't have to suffer spasm to enjoy the comfort provided by the Extensors "Suspension", it is suited to almost all types of disability.

Extensor also incorporates integral slide sheets for easier fitting and enhanced tissue viability properties. To complete the high level of support and comfort provided by this superb sling, Extensor has an adjustable HeadShell fitted as standard.

ICES / Hospital Glove Deluxe

Offering incredible value, these Contract Glove Deluxe slings with padded leg supports are available in packs of five and pack of ten. They are comfortable. Robust, wash at up to 95 degrees and can be tumbled dried. They also have a fire retardant quality. Clip or looped strap versions are available to be compatible with Arjo, Oxford and other leading makes of hoist. We guarantee compatibility and have full product liability insurance. You win on all counts. You get better budget management, comfortable slings and peace of mind. Call us for prices, they are too cheap to publish.

Tux Glove

Following the success and popularity of Foxy Gloves, we were asked to design a similar sling with an integral slide sheet but suitable for men and slimmer ladies. Built-in slide sheets are provided to ease of fitting and with added tissue viability benefits. HeadShells are also available as an accessory to the Tux Glove range. Sized from Paediatric to Bariatric (size 12 - 350kg/55stone).

Classic Deluxe

Our most popular style of sling providing excellent support and superior levels of comfort. There is a loop Velcro around the collar to facilitate attachment of a HeadShell Available in 12 sizes up to 350kg/55stone. Children's sizes include a Velcro chest band as standard (see below).

Kid Gloves and Special Edition Gloves

Available in most popular sizes and styles thus eliminating the need for specially made slings in most cases. This saves you time and money.

Our range of children's slings are currently in "Paws for Africa" fabric. Despite the bright fun designs, there is no compromise on quality or performance. Kid Gloves are a logical choice for most children.

Special Edition Glove Deluxe slings offer an alternative look for older children, teenagers and anyone who wants something a bit different. At the time of printing this brochure, we are making the Denim Deluxe slings as shown, why not check our web site www.disabilityequipment.com to see if there is anything new.

Convenience Sling

Excellent access for toileting and for clothing adjustment providing vastly superior support and comfort compared to similar shaped slings. Innovative unique "anti-jack knife" design, considered by many to be in advance of it's peers. Also features our unique "Flap Back" Velcro chest band that does not snag clothing.

This innovative sling can be used by many users previously considered unsuitable to transfer with a Toileting/Access style of sling.

Hug - Superb improved design for 2007

( for seat use only)

An advanced design in sling technology offering the benefits of a toileting/access sling to user with minimal upper body strength who might previously only have been able to consider the option of a full body sling.

The hugging effect of the sling is designed to grip securely yet comfortably helping the user from sliding down into the aperture. The unique high back support enables the user to be lifted from a bed or even the floor - an option currently not available from alternative makes of toileting/access style slings. Excellent lower body accessibility is provided to facilitate hygiene tasks and the open design of The Hug enables it to be more easily fitted that conventional slings to people using a snugly fitting wheelchair.

The Hug has also been designed to uniquely be transformed into a Standing/Walking harness. The padded thigh grips combined with the hugging effect of the sling provides comfort and security for the user.

The Hug is an ideal sling for physio gyms and schools as well as instances where an access/toileting sling has been desired but has not previously been thought possible.
